FAREGO SUITE
MODULAR
TICKETING SOFTWARE

SCHEIDT&BACHMANN SB

/FareGo Suite *MODULAR TICKETING SOFTWARE*

FareGo Suite is the new cloud-based ticketing software from Scheidt & Bachmann and centrepiece of our intelligent account-based ticketing (ABT) systems.

The modular software is a flexible business-solution that meets all of your current and future ticketing demands. FareGo Suite covers the entire functionality of classical back-office systems like administration of your ticketing devices. These basic functionalities are already far more effective and user-friendly compared to previous generation systems due to the utilisation of account-based technology. The highlight of FareGo Suite is the scope of available features you have at hand to make innovative mobility concepts a reality.

Automated best-price calculation, business intelligence or customer relationship management are just a few examples of FareGo Suite's innovative functionalities. All these functionalities are realised through integrated mo-

dules. Thus, all data can be interlinked system-wide for the creation of a customer-friendly and individually tailored ticketing portfolio.

Best of all: you are able to adapt your ticketing to changing demands in real time – elaborate tariff changes with long lead time and high planning effort are a thing of the past due to the flexible account-based architecture of FareGo Suite. This applies to every measure inside the system, from report generation to comprehensive data archiving.

We offer FareGo Suite as local installation or as hosted IT service.

FAREGO SUITE PRODUCT PORTFOLIO

A FareGo Suite system is composed of various individual product modules which have been specially developed for execution of particular key functions. You are able to merge those products into your custom-tailored FareGo Suite system, which meets your unique agency requirements. Due to the consistent modularity and scalability you are always able to adapt your system to changing framework conditions, e.g. by adding additional products. FareGo Suite is categorised into the product lines Center, Access and Connect.

/ CENTER

FareGo Suite Center products provide core functionalities of account-based ticketing systems.

Account.Center
Account and media management, tap and product history.

Asset.Center
Device management: handles configuration, access management and monitoring of device fleet (successor of FareGo Data CS).

Clearing.Center
Clearing house, end-of-day-processing, revenue allocation.

Customer.Center
Customer relationship management, loyalty schemes.

Mobility.Center
Travel planning and and passenger information.

Payment.Center
Infrastructure for cashless payments: scalable from PIN pad support software to authorisation server with P2PE, PA-DSS certification and payment gateway services.

Reporting.Center
Business intelligence and data-warehouse systems for creation of detailed evaluation as well as comprehensive reports and statistics.

Supply.Center
Media management, supplier and retail channels.

Tariff.Center
Tariff, products, journey construction, tap processing. Central production of barcodes for issued products.

/ ACCESS

FareGo Suite Access products enable the utilisation of various ticket media and processing of specific ticketing standards.

SBCard.Access
Use Scheidt & Bachmann smart cards to travel.

ITSO.Access
Use ITSO smart cards to travel.

KA.Access
Use VDV-KA smart cards to travel.

Calypso.Access
Use Calypso smart cards to travel.

UID.Access
Use any Mifare smart card to travel based on its generic UID.

EMV.Access
Use any contactless EMV card to travel in closed or open loop approach.

App.Access
Use the FareGo App to travel based on dynamic barcodes or the NFC functionality of the smartphone.

BiBo.Access
Use the FareGo App to travel based on Be-In/Be-Out detection the app performs towards BLE beacons.

Paper.Access
Use machine readable paper tickets to travel and let FareGo Suite take care to make the travel on paper tickets secure.

Barcode.Access
Use barcodes sold on paper tickets or used in a self-print model to travel and let FareGo Suite take care to make the travel on barcodes secure.

MagStripe.Access
Use magstripe cards to travel.

For all supported identification media FareGo Suite takes care of validation and inspection of the media whilst traveling. All sales channels like TVM, POS, web portal and the FareGo App allow to purchase products and to manage e-purse balances of the related accounts. The risk engine and list engine of FareGo Suite take care that the usage of the supported ID media is equally secure and risk free for the operator and the passengers.

/ CONNECT

FareGo Suite Connect products offer flexible interfaces for integration of external services and linkage to a wide range of systems.

Account.Connect
Interface for integrating 3rd party account management systems.

BI.Connect
Data exports to 3rd party data warehouses.

CADAVL.Connect
Interface on bus infrastructure to connect to CAD/AVL equipment of 3rd party suppliers.

Web.Connect
Interface to allow connection between customised web pages and the system.

/Customisable *FOR INDIVIDUAL REQUIREMENTS*

FareGo Suite makes efficient use of standards supplemented with individual adaptations. Our system specialists create a system based on your needs from our standard modules which largely cover your requirements. Additional functions are specified in collaboration with you, developed on an agile basis and introduced after joint testing. The individual modules can be supplemented with individual third-party components as required.

You receive a system that meets your precise requirement and that will make your fare collection highly efficient over the long life of the system and future-proof.

/Managed Service *FOR BEST PERFORMANCE 24/7*

What is even better than an ABT system that allows you to finish your work quickly and efficiently? An ABT systems that creates no work for you at all. Why not let someone do the work who knows the system better than anyone else: Scheidt & Bachmann.

With our managed services and operational models, we take over responsibility for your system 24 hours a day, 7 days a week.

We take care of all aspects of your ABT system. Whether we house your system at our state-of-the-art computer centres for fail-proof performance or take over complete operation on your behalf – you can be assured of a round-the-clock, high-performance system in line with the very latest standards and with PCI-DSS certified security.

It goes without saying that complete access to your data is available. Sophisticated reporting and analysis tools make evaluation simple and fast for all those who need it.
